

Amendment to the Claims:

1. - 20. (Cancelled)

21. (New) A granulation process, comprising:

 applying a water-based air foam to a powder of an average particle size of less than 1000 micrometers; and

 mixing the foam and powder to agglomerate the particles,

 provided that at least one of the foam or the powder contains a binder, and that the agglomerated particles contain a therapeutic agent.

22. (New) The granulation process of Claim 21, wherein the water-based air foam is applied without atomizing.

23. (New) The granulation process of Claim 21, wherein the water-based air foam is applied on top of the powder.

24. (New) The granulation process of Claim 21, wherein the powder is of an average particle size of less than 750 micrometers.

25. (New) The granulation process of Claim 21, wherein the powder is of an average particle size of less than 500 micrometers.

26. (New) The granulation process of Claim 21, wherein the water-based air foam comprises 99.99 to 90 weight percent of an aqueous liquid diluent.
